

7th March 2012

Hi everyone.....

I thought I would just touch base with you all regarding our latest development.

For those of you that have wished for timber furniture instead of aluminum, your wish has come true! I can now offer either timber or aluminum furniture. We have developed a light weight timber panel.

The photo below is a sample of a curved door. Light weight and strong with a beautiful real timber finish. The factory has just started another unit, which will have this timber furniture. Photo's will be available in about two months.

I have tried everything to get the weight down in the 27FLB. Unfortunately without reducing much requested features, it is not possible. The set weight for this model will be 3600kg empty, and 4495 kg loaded. This will give a cargo capacity of 895kg.

These are some photos of the second unit to leave the factory.

Unit 4-3 Three Chain Road, South Lismore NSW 2480

The new bench tops look great; they are now an acrylic stone look.

I have made a video of the first unit. To view, please follow the below link:
